

(Received 05/10/2010 via email)

As a resident of Discovery Bay and a frequent user of the Delta, I am very concerned about the "rapid science study" that is being done to justify the "two Gates" project. A complete environmental impact report needs to be done. There are issues with water flow, or lack of it, to the South Delta which need to be addressed very thoroughly. The term "Rapid Science" sounds like quite an oxymoron. Some things can't be rushed. The science needs to be looked at thoroughly, not rapidly. People with an agenda should not be allowed to manipulate the science.
